

YOUR CHILDREN DESERVE...

Beautiful Smiles

Children with narrow arches need to wear a functional appliance to expand their arches to make room for all the permanent teeth and create beautiful broad smiles.

Healthy Mouth

Many children with narrow jaws, deep overbites or receding lower joints, have problems with head aches, neck pain, dizziness, and ear aches.

High Self-Esteem

Children are often self-conscious about their crooked teeth and underdeveloped lower jaws. Early treatment can improve their self-esteem, which is very important for a growing child.

No More Snoring

Children with airway obstructions, such as enlarged Tonsils, often snore which can lead to sleep apnea. This frequently causes poor sleeping habits, excessive daytime fatigue and inability to concentrate in school.

WHY ARE FUNCTIONAL APPLIANCES SO IMPORTANT?

For the Correction of:

Underdeveloped Jaws
Crowded Teeth
Thumb-Sucking Habit

Narrow Arches
Deep Overbites
Jaw Joint Problems

To Eliminate Need For Extractions

Functional appliances develop arches and make room for all permanent teeth, thereby eliminating the need for extraction of permanent teeth.

Preventing Speech Problems

Narrow jaws result in less room for the tongue, which can interfere with normal speech. Functional appliances can expand the arches, make room for the tongue, and ensure normal speech.
